EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

On page 39, line 8, "Voo" has been changed to -Vpp--.

On page 40, line 6, "cell node CN1" has been changed to -cell node N1--.

Allowable Subject Matter

- 2. Claims 1-4 are allowed.
- 3. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or suggest a semiconductor memory device having ferroelectric capacitors connected in parallel with cell transistors. The semiconductor memory device comprises a control circuit which controls a semiconductor memory circuit in an operation time to raise gate potentials of block selection transistors to be selected from a first potential to a second potential to read cell data from the memory cells of the selected block selection transistors onto the bit lines, thereafter set the bit lines to a high level to write "1" data into the memory cells regardless of a logic level of data to be written, thereafter set the gate potentials of the selected block selection transistors to a third potential lower than the second potential and higher than the first potential, set the bit line to a low level with "0" data to be written to write "0" data into the memory cells,

and thereafter to lower the gate potentials of the selected block selection transistors to the first potential.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takeuchi (U.S. Patent 6,366,490) and Roehr (U.S. Patent 6,584,009) teach ferroelectric memory devices having block selection transistors for selecting series of capacitors and parallel cell transistors.
